

WHY YOUR SURGEON USES THE **KELLER FUNNEL™2**

DESIGNED WITH THE SURGEON PATIENT IN MIND

The **KELLER Funnel™2** is a silicone implant delivery tool designed by a plastic surgeon to improve the implant placement procedure for both doctors and their patients.

Just as you have a choice in the type of implant you prefer for your procedure, plastic surgeons may choose between the traditional implant delivery method using their fingers for insertion or a newer technique using the **KELLER Funnel™2**, a device that gently slips an implant into place.

EXPERIENCE THE EVOLUTION OF IMPLANT DELIVERY

WHY DOES YOUR SURGEON USE THE **KELLER FUNNEL™2**?

Your doctor may choose to incorporate the funnel in your procedure for a number of reasons. One reason may be that the **KELLER FUNNEL™2** allows your surgeon to employ a “No Touch” technique, which helps reduce the risk of contamination by minimizing the amount of contact between the implant and the incision¹.

The **KELLER FUNNEL™2** in use with a textured breast implant.

WHAT IS THE **KELLER FUNNEL™2**?

Made of a clear vinyl material with an extremely slippery coating inside, the **KELLER FUNNEL™2** allows surgeons to use the device universally with silicone implants, including breast; pectoral; gluteal; and calf; and allows the surgeon to place the implant gently and with very little force.

Before surgery, talk to your doctor about the technique he or she uses to place implants with the **KELLER FUNNEL™2**.
